

PRODUCT INFORMATION SHEET
Crème Soap on Tap

Crème soap on tap can be used for washing hands, face or all over the body in a shower

FEATURES

- Crème soap on tap is a viscous, pearlescent white liquid with a mild cosmetic fragrance. It can be used for washing hands, face or all over the body in a shower.
- Crème soap on tap is based on a blend of mild cleansers derived from coconut oil and synthetic sources. These cleansers foam in all water conditions and clean the skin without degreasing it. The cleansers do not form a scum in hard water making bowls and showers easier to clean.
- Crème soap on tap is enriched with glycerine to moisturise the skin, and lanolin incorporate protective oils

HOW TO USE

- Crème soap on tap can be used through most refillable soap dispensers. Simply squirt a small amount onto wetted skin, work into a lather and rinse off.
- The product must always be added to the dispenser in the neat form. Do not predilute with water as the preservative will also be diluted and may become ineffective
